**Results**

GENETIC TEST(S)	GENOTYPE
Progressive retinal atrophy (PRA-prcd)	<b>N/N</b>

**Genotype Interpretation Form****Genotype N/N – CLEAR/NON-AFFECTED**

The clear dog does not carry the mutation (a clear dog has two copies of the normal gene and will not pass on the mutation to their offspring).

**Genotype N/A – CARRIER**

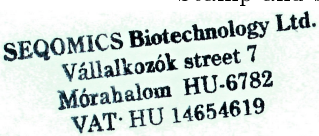

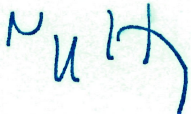

The carrier dog has one copy of the normal form of the gene and one copy of the mutated gene (this is also referred to as being heterozygous), but it will not exhibit disease symptoms. Carriers will not have medical problems as a result. Gene mutation can be transmitted to half of their offspring. Inform your veterinarian and consult with him/her regarding test result.

**Genotype A/A – AFFECTED**

The affected dog has two copies of the gene mutation (this is also referred to as being homozygous sick). Affected dogs will pass one copy of this mutation on to all of their offspring and should not be used for breeding. Inform your veterinarian and consult with him/her regarding this test result.

**Notes**

PRA-prcd: presence or absence of the c.5G>A mutation in PRCD gene was determined by sequencing.
